## Humans geoengineer to modify weather and experiment with weather warfare, releasing methane

Geoengineering programs shred ozone layer Increases • Radiation/cancer

Temperatures
Wildlife extinction

Methane Carbon Aluminum Barium Sulpher Strontium Flouride Radiation Bio-Chemical

C

## Hydrological Cycle Disrupted from geoengineering aerosols

• Decreased water flows stress cities and agricultural production threatening billions world-wide

• Ocean conveyor currents disrupted, creating catastrophic global climate collapse

## Geoengineering aerosols trap more heat than they reflect Increases

- Global warming
  Arctic ice melt
  - Tundra thaw
- Extreme weather
  - Sea level rise

## Toxic geoengineering particulates kill forests with the fallout

 Deforestation releases massive carbon and increases soil temperatures
 Wildlife biodiversity loss promoting species extinction

• Diminishing tree biodiversity
